## Requests

### asking AI about QA

#### Description

#### Request

---

- **Purpose**: Used for general text generation tasks where you provide a single prompt, and the model generates a continuation or response.

- **Use Case**: Ideal for simple, one-off text completions, such as generating text, answering a question, or continuing a story without a conversational context.

- **Request Structure**: Expects a single prompt field in the JSON payload

#### Response:

---

- **Response**: Returns a single text output, typically in a field like `choices[0].text`.

- **Behavior**: Treats the input as a standalone prompt without maintaining conversational context.

#### Use:

---

Use `/completions` for simple, non-conversational tasks like generating a story, summarizing text, or answering a single question without needing context.

## Get Dialogue

### Description

#### GET Request:

Retrieve the result via [https://api.x.ai/v1/chat/deferred-completion/{request\\_id}](https://api.x.ai/v1/chat/deferred-completion/{request_id}):

First:

You send a POST request to <https://api.x.ai/v1/chat/completions> with "async": true, which returns a request\_id (e.g., {"request\_id": "some-unique-id"}) instead of the full response.
